

Folimax

premium water-soluble foliar feed

20+20+20+TE

Total power over crop nutrition with Folimax Total

Application rates

Apply under high pressure.

Can be mixed with many fungicides/insecticides.
Contact us for information.

For all mixes with chemicals, do a small trial before using on a large scale. Check response in two or three days.

Avoid spraying in bright sunlight, high midday temperatures, and high evaporation period).

Dissolve 3-5 kg in 200-600 liters of water per hectare for outdoor applications.

We recommend a 0.3% solution for greenhouse application.

Folimax Total is a premium water-soluble foliar feed, packed with a balance of essential elements to prevent deficiencies of all major and minor nutrients. It is suitable for a wide range of crops, especially those that may suffer from stress or uptake difficulties during cold or wet growing periods, high soil pH, and heavy production.

In addition to the usual NPK, Power Total contains a chelated trace element and a stimulant package for optimal uptake through the foliage and prolonged availability of microelements. Produced from the purest raw materials, Folimax Total dissolves quickly, making it easy to apply, and it won't block your spraying equipment.

Please contact your sales representative for specific product and application advice.

Attention: Trail first on a small scale before changing the rate, or any other variables, As circumstances can differ and the application of our products is beyond our control, Livatty cannot be held responsible for any adverse results.
